-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 27 June 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-15 and 23-36 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-15 and 23-36 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-15 and 22-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over SAVITZKY (US 6,012,083) in view of "Java Developer's Guide" by JAWORSKI. As to claim 1, SAVITZKY teaches a method for serving remote procedure calls from a client (client / browser), the method comprising: receiving from the client a request for a document (document request / request in URL) (client sends a server a document request for a document in the form of a URL) (col. 1, line 63 – col. 2, line 5); determining that the request specifies a function (execute script) which is defined within a computer process (server program) executing independently of the client (server identifies the request as a request to execute a script rather than a request for a document) (col. 2, lines 7-10); and executing the function in response to receipt of the request (the server executes the CGI script, possibly using arguments passes as part of the URL) (col. 1, line 63 – col. 2, line 43). It is inherent that the script has instructions that are thereby executed when invoked in order to generate the document. It is also inherent that since the request is a request to execute a script and not a request for a document, that the request is unrelated to any generation or retrieval of a document. However, SAVITZKY does not teach the server as a local server wherein the system

that generates the request is the system that serves it or that the client is an applet which executes on an applet viewer.

JAWORSKI teaches a browser which sends a request according to a document retrieval protocol implemented on a computer network (HTTP POST / GET requests) to a web server (WebServerApp / localhost) (pg. 521, A Web Server) that is on the same machine as the browser (web browser) (pg. 524, paragraphs after NOTE, "Launch your favorite Web browser and open the URL of your machine followed by :8080."; pg. 525, "If you cannot find your hostname, you can use localhost instead.") and that a network client (browser) is a delivery mechanism for an embedded client (applet) (pg. 563, Using Applets as Network Clients). It would be obvious that since the browser and the web server are stored on the same system, i.e. they have the same machine URL, they are local to one another and that when combined with the teachings of SAVITZKY, the functions are therefore sent and executed on the same system. It would also be obvious that since the browser operates as a delivery mechanism for an applet that when combined with the teachings of SAVITZKY the applet would initially generate the request. Therefore, it would be obvious to combine the teachings of SAVITZKY with the teachings of JAWORSKI in order to facilitate local processing of requests.

As to claim 2, SAVITZKY teaches the client (client / browser) sending a document request (document request) in the form of a URL where the URL refers not to a document on the server but to a program on the server (via a script) (col. 1, line 63 – col. 2, line 20). A URL is a portion of namespace in a browser for identifying resources

or documents and since the URL in SAVITZKY is used to identify a function as well as a document, the URL is a namespace in the browser for function requests.

As to claim 3, SAVITZKY teaches returning to the client result data produced by execution of the function (dynamic document of server side code execution) (col. 2, lines 10-14; col. 2, lines 5-7).

As to claim 4, SAVITZKY teaches the returning comprises: forming a document which includes data; and sending the document (dynamic document of server side code execution) to the client (client / browser) (col. 2, lines 10-14; col. 2, lines 5-7).

JAWORSKI teach the request is generated by an applet (applet / embedded HTTP client) executing on an applet viewer (browser client / delivery mechanism) (pg. 563, Using Applets as Network Clients). It would be obvious that since the applet generated the request that it receives the results as disclosed by SAVITZKY.

As to claim 5, JAWORSKI teaches the document retrieval protocol is HTTP (pg. 521, A Web Server).

As to claims 6-10, reference is made to a computer readable medium that corresponds to the method of claims 1-5 and is therefore met by the rejection of claims 1-5 above.

As to claims 11-15, reference is made to a system that corresponds to the method of claim 1-5 and is therefore met by the rejection of claims 1-5 above.

As to claim 22, JAWORSKI teaches the function includes a remote procedure call (create WebServer object and invokes its run method) (pg. 525).

As to claim 23, SAVITZKY teaches a method for serving remote procedure calls from within a first computer process (browser / client), the method comprising: receiving a request for a data file (document request / request in URL) (client sends a server a document request for a document in the form of a URL) (col. 1, line 63 – col. 2, line 5); determining that the request specifies a function (execute script) which is defined within a second computer process (server program) executing independently of the first computer process (server identifies the request as a request to execute a script rather than a request for a document) (col. 2, lines 7-10); and executing the function in response to receipt of the request (the server executes the CGI script, possibly using arguments passes as part of the URL) (col. 1, line 63 – col. 2, line 43). It is inherent that the script has instructions that are thereby executed when invoked in order to generate the document and that the browser / client and server has instructions which enable it to request / send and process a request. It is also inherent that since the request is a request to execute a script and not a request for a document, that the request is unrelated to any generation or retrieval of a document. However, SAVITZKY does not

teach the server as a local server wherein the system that generates the request is the system that serves it.

JAWORSKI teaches a browser which sends a request according to a document retrieval protocol implemented on a computer network (HTTP POST / GET requests) to a web server (WebServerApp / localhost) (pg. 521, A Web Server) that is on the same machine as the browser (web browser) (pg. 524, paragraphs after NOTE, "Launch your favorite Web browser and open the URL of your machine followed by :8080.."; pg. 525, "If you cannot find your hostname, you can use localhost instead."). It would be obvious that since the browser and the web server are stored on the same system, i.e. they have the same machine URL, they are local to one another and that when combined with the teachings of SAVITZKY, the functions are therefore sent and executed on the same system. Therefore, it would be obvious to combine the teachings of SAVITZKY with the teachings of JAWORSKI in order to facilitate local processing of requests.

As to claim 24, SAVITZKY teaches the client sending a document request in the form of a URL where the URL refers not to a document on the server but to a program on the server (via a script). A URL is a portion of namespace in a browser for identifying resources or documents and since the URL in SAVITZKY is used to identify a function as well as a document, the URL is a namespace in the browser for function requests.

As to claim 25, SAVITZKY teaches returning to the result data produced by execution of the function (dynamic document of server side code execution) (col. 2, lines 10-14).

As to claim 26, SAVITZKY teaches the returning comprises: forming a document which includes data; and sending the document (dynamic document of server side code execution) to the first computer process (client / browser) (col. 2, lines 10-14; col. 2, lines 5-7).

As to claim 27, JAWORSKI teaches the document retrieval protocol is HTTP (pg. 521, A Web Server).

As to claims 28-32, reference is made to a system that corresponds to the method of claims 23-27 and is therefore met by the rejection of claims 23-27 above.

As to claims 33, SAVITZKY teaches a method for serving remote procedure calls from within a first computer process (browser / client), the method comprising: receiving a request for a document (document request / request in URL) (client sends a server a document request for a document in the form of a URL) (col. 1, line 63 – col. 2, line 5); determining that the request specifies a function (execute script) which is defined within a second computer process (server program) executing independently of the first computer process (server identifies the request as a request to execute a script rather

Art Unit: 2126

than a request for a document) (col. 2, lines 7-10). It is inherent that the script has instructions that are thereby executed when invoked in order to generate the document and that the browser / client and server has instructions which enable it to request / send and process a request. It is also inherent that since the request is a request to execute a script and not a request for a document, that the request is unrelated to any generation or retrieval of a document in a conventional HTTP manner. However, SAVITZKY does not teach the first computer process is an applet executing in an applet viewer and the server as a local server wherein the system that generates the request is the system that serves it.

JAWORSKI teaches a browser which sends a request according to a document retrieval protocol implemented on a computer network (HTTP POST / GET requests) to a web server (WebServerApp / localhost) (pg. 521, A Web Server) that is on the same machine as the browser (web browser) by using an URL (pg. 524, paragraphs after NOTE, "Launch your favorite Web browser and open the URL of your machine followed by :8080.."; pg. 525, "If you cannot find your hostname, you can use localhost instead."). It would be obvious that since the browser and the web server are stored on the same system, i.e. they have the same machine URL, they are local to one another and that when combined with the teachings of SAVITZKY, the functions are therefore sent and executed on the same system. Therefore, it would be obvious to combine the teachings of SAVITZKY with the teachings of JAWORSKI in order to facilitate local processing of requests.

As to claim 34, SAVITZKY teaches executing the function in response to receipt of the request (the server executes the CGI script, possibly using arguments passes as part of the URL) (col. 1, line 63 – col. 2, line 43).

As to claims 35 and 36, reference is made to a computer system that corresponds to the method of claims 33 and 34 above, and is therefore met by the rejection of claims 33 and 34 above.

Response to Arguments

3. Applicant's arguments filed 6/27/03 have been fully considered but they are not persuasive.

Applicant argues that in regards to claim 1, Savitzky does not teach or suggest the combination of elements. For example, Applicant argues that Savitzky describes a client sending a document request to a server for a document in the form of a URL to execute a script that is defined in a program on the server, is expressly contrary to Applicant's recitation of execution of a function "which performs a task which is unrelated to both generation and retrieval of any document specified in the request". The examiner disagrees. First, the examiner would like to make Applicant aware that interpretation of the limitation of a "function not related to both the generation and retrieval of any document specified in the request" is a request to execute a function contrary to a conventional HTTP manner. In support of this interpretation, the examiner points to block D1 in amendment D, paper number 30, received on 2/7/02 which details

Art Unit: 2126

that an applet is configured to invoke RPC functions. The RPC process includes an HTTP server which serves HTTP requests in a conventional manner, i.e. receives a URL which specifies a requested document and produces the requested document in response to the received URL. To invoke a RPC function, applet forms a URL according to the steps of logic flow diagram 300 and sends the URL to RPC function. Therefore, the URL has to identify the RPC function along with its parameters, not a requested document, in order to invoke the RPC function. The limitation of “the task being unrelated to both generation and retrieval of any document specified in the request”, consists of the task to be invoked being a separate RPC function and not the conventional document processing with an HTTP server which does not invoke a separate RPC function in retrieving a requested document. The examiner also refers to page 9, line 6 – page 12, line 6. In this section, Applicant describes the processing of a document request by receiving the request, producing the document, and sending back the document being executed by the HTTP server (explicitly at page 10, lines 4-8). Applicant also describes the invention of processing of a function request by receiving the request, parsing the request, sending the request to the requested function for execution, and returning the results (explicitly at page 10, line 9 – page 12, line 6). This cited disclosure also illustrates that the task, i.e. the function, is “unrelated to both generation and retrieval of any document specified in the request” since the function request processing is performed different than the conventional document request processing by detailing the function name and parameters in the URL request. Based on this interpretation, Savitzky adequately teaches the limitation of executing a function

(script) that is unrelated to both generation and retrieval of any document specified in the request since the script is invoked and a document is not returned as disclosed in a conventional HTTP manner.

Secondly, the examiner is requesting Applicant to provide support in the specification for the limitation that the function is unrelated to both the generation and retrieval of any document specified. The examiner has found disclosures of the function being unrelated to the retrieval of a document specified in that the RPC URL specifies a function and not a document. However, no support can be found that the function is unrelated to the generation of the document. In fact, Applicant's dependent claim 4 detail that execution of the function generates and returns a document. The examiner also cannot find support as to what the function is considered to be and there are not claim limitations that allude as to what the function is considered to be. It seems Applicant is attempting to exclude possibilities of the function without disclosing what is considered to be the function. The examiner must examine the claims in the broadest reasonable interpretation consistent with the specification (M.P.E.P. 2111) and since there cannot be found any limitations in the specification or the claims as to what the function is considered to be, the Examiner feels that his interpretation is reasonable as taught above. Therefore, the rejection is maintained.

As to the remaining claims, Applicant argues that the combination does not teach both a request for a document / data file and determining that the request for the data file specifies a function...execution of which performs a task which is unrelated to both generation and retrieval of a document / data file specified in the request. The examiner

disagrees. As pointed out above, the combination teaches receiving a request for a document / data file (client sends a server a document request for a document in the form of a URL) (col. 1, line 63 – col. 2, line 5) and determining that the request for the data file specifies a function (server identifies the request as a request to execute a script rather than a request for a document) (col. 2, lines 7-10)...execution of which performs a task which is unrelated to both generation and retrieval of a document / data file specified in the request (executes script instead of performing conventional HTTP processing). Therefore, those rejections are also maintained.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lewis A. Bullock, Jr. whose telephone number is (703)

Art Unit: 2126

305-0439. The examiner can normally be reached on Monday-Friday, 8:30 am - 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John A Follansbee can be reached on (703) 305-8498. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-0286.
